## S1900e High-Resolution Video Encoder with Video Analytics

### At A Glance:

- Compact, high-resolution video encoder
- Ideal for indoor, single-camera applications
- Dual-stream, MPEG-4 SP video up to 4CIF/30fps
- Optional embedded video analytics for rapidly detecting important activity
- Enhanced security via SSL-based authentication
- Configure and manage using Nextiva or other video management applications

The Nextiva S1900e is a powerful, single-port video encoder for indoor use that helps organizations extend the value of their analog video cameras, as they leverage the power of sophisticated IP video technology.

The S1900e video encoder digitizes and transmits video from a single analog camera over IP networks, delivering dual-stream, MPEG-4 video up to 4CIF/30 frames per second. Dual streaming enables video to be viewed at high resolution and stored at lower resolution, optimizing storage resources while delivering excellent image clarity.

With optional extended temperature support, the S1900e can be installed in locations that experience wide temperature ranges. A noise reduction filter reduces bandwidth usage, and SSL-based authentication helps prevent unauthorized access.

### Powerful, Embedded Video Analytics

Nextiva integrated, on-board video analytics analyze images at the point of capture and eliminate the need to send all video to centralized servers for analysis. This can significantly reduce network bandwidth, storage, and server requirements, while providing highly accurate image analysis. A wide array of Nextiva analytic applications is available for use with the S1900e. Nextiva analytics are fully integrated with other Nextiva solutions and software management applications. So, video analytic rules can be easily created and applied within the video management environment, and alerts can be distributed almost anywhere according to an organization's security policies.

### Easy to Configure and Manage

The S1900e video server is built on accepted industry standards for easy interoperability with existing IT infrastructure and video equipment. Up to five authorized users can monitor live video simultaneously and configure unit settings from a Web browser.

The Nextiva S1900e is built for outstanding performance and easy installation and management using either Nextiva Enterprise or other video management software (via the Nextiva Advantage SDK). With Nextiva Enterprise, the S1900e can be remotely configured with the user-friendly Nextiva Control Center. Nextiva HealthCheck can continuously monitor the performance of the S1900e, with automated diagnostics and problem correction for greater uptime and lower service costs.

## About Verint Video Intelligence Solutions

Verint® Video Intelligence Solutions is the worldwide leader in networked video, a “single source” for virtually every facet of video surveillance operations: from cameras, encoders, and intelligent DVRs to video management, viewing, and analytics software.

## Verint. Powering Actionable Intelligence.®

Verint Systems Inc. is a leading provider of Actionable Intelligence® solutions for an optimized enterprise and a safer world. More than 10,000 organizations in over 150 countries rely on Verint solutions to perform more effectively, build competitive advantage, and enhance the security of people, facilities, and infrastructure.
